

DIVYA CHOUHAN

Ruby on Rails Developer | Available To Work Full-Time

Gmail: chdivya569@gmail.com **Mob.** 8305735979 **Skype:** [live:.cid.330b87ae5fa4da10](https://livecid.com/cid.330b87ae5fa4da10)

Professional Overview

Results-driven Full-Stack engineer with 10 years of experience in strategic problem-solving and development skills. Experienced in programming to achieve concrete goals on a strict deadline.

I have been specialising in Ruby on Rails, along with numerous front-end frameworks, including ReactJS. Several years of Freelance endeavours eventually led me to become an expert in Full-Stack Web Development.

Education

Acropolis Technical Campus (2011 – 2015)
Bachelor's of Engineering, Computer Science

Experience Highlights

Ruby on Rails Developer | Full-Time Freelance

March 2023 – Present

Bird Vision AB

Lead Software Developer - March 2020 - Feb 2023

BestPeers Infosystem Private Limited | CMMI Level 3

Software Developer - Aug 2017 - March 2020

Precious info system

Associate Software Developer - June 2016- August 2017

Opentext Technologies

Junior Software Developer - Sep 2015 - March 2016

Core Technical Competencies

Back-end: Ruby, Ruby on Rails, REST APIs, Microservices

Front-end: ReactJS, Redux, JavaScript (ES6), HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Cloud: AWS, Docker, Docker Compose, DigitalOcean, CI/CD

Tools & Integrations: Git, Jira, Postman, Stripe, PayPal, Shopify, OAuth2

Testing & Practices: RSpec, TDD, BDD, Agile, Scrum

Other Skills: SaaS Development, E-commerce Platforms, Payment Gateway Integration

Project Showcase

Mondido <https://www.mondido.com/>

About the Project: Mondido is a fintech payment platform that enables e-commerce businesses to securely accept online payments. It provides payment gateway solutions, Shopify integrations, recurring billing, and support for local Nordic payment methods like Swish and Vipps. The platform also offers APIs, real-time transaction tracking, and checkout optimisation to improve online sales and payment experience.

Role: Sr. Software Engineer

Technologies: Ruby on Rails, JavaScript, React, TypeScript, Shopify tools - AWS, argocd

Responsibilities

- Led the development of webhook integrations for real-time data sharing across systems, improving reliability and performance.
- Handled end-to-end integration of the Vipps payment method in Shopify, adding a new payment option and improving the checkout experience.
- Built and improved currency conversion logic for international transactions, ensuring accurate pricing across regions.
- Improved testing for financial features, including edge cases in currency conversion, to ensure correct pricing and smooth transactions.
- Worked closely with teams and created clear documentation for future use.

Bookingoschema: <https://www.bokningoschema.se/>

About the Project: Bookingoschema is a cloud-based workforce management and scheduling platform designed for small and medium-sized businesses. It helps companies manage employee scheduling, time tracking, invoicing, project management, and payroll in one system. The platform also provides mobile apps, GPS-based clock-in/out, recurring task automation, and integrations with tools like Fortnox and Visma for smooth business operations.

Role: Lead developer

Technologies: Ruby on Rails, ReactJS, MySQL, DigitalOcean

Responsibilities :

- Discussed new features and enhancements based on customer reviews.
- Add a task and break it down into multiple tasks to start work on the same.
- Added initial integration of new features if required. Review code and approve for deployments.
- Handle deployments on a live server.

HungryHub: <https://web.hungryhub.com/?locale=en>

About the Project: This was a restaurant website based on ROR. It was taking time to load, so I converted it into modules (microservice), so it can improve the performance of the website.

Role: Ruby on Rails Developer

Responsibilities: In this project, I redesigned a restaurant website from a monolithic application to a microservice architecture, aiming to boost website performance. Responsibilities included architecture design, breaking down functionalities into microservices, API integration, optimisation, testing, documentation, and deployment.

Skills Used: Microservice, Ruby on rails, mysql

If you have any opportunity that matches my experience and skill set, I would be glad to discuss it further. I am confident that my expertise and dedication will bring value to your team.

I am available to get started right away, ready to contribute full-time and for the long run.

Looking forward to your response and the opportunity to connect soon.

Thanks,
Divya Chouhan
